

FINANCIAL IMPACT

HTML PRESENTATION

Prompt Guideline — Francisco

Step-by-step instructions to reproduce the research analysis page

3 Business Lines · 3 Key Trends · McKinsey-style Storytelling

Component	Detail
Role	Expert in graphic design, storytelling & executive presentation development
Output	Single interactive HTML page — fully self-contained (inline CSS/JS)
Business lines	Loans · Payments · Deposits
Key trends	Market Landscape · Disruptive Forces · Economic Impact
Source data	GitHub repo — 3 feature branches
Design style	McKinsey / BCG executive consulting aesthetic

Variables are highlighted in [BRACKETS] throughout every prompt section.

SECTION 1 — THE COMPLETE PROMPT

This is the full prompt as originally written. Copy it verbatim and replace the highlighted **[VARIABLE]** placeholders with your own values before sending it to an AI.

Role & Objective

You are an expert in graphic design, storytelling, and executive presentation development. Your task is to transform research into a clean, interactive, and visually compelling HTML-based presentation suitable for senior leadership.

Context

We are preparing a final presentation based on research about the future of financial services in the United States.

The analysis is structured across:

* 3 business lines:

1. **[BUSINESS_LINE_1]**
2. **[BUSINESS_LINE_2]**
3. **[BUSINESS_LINE_3]**

* 3 key trends:

- a. **[TREND_1]**
- b. **[TREND_2]**
- c. **[TREND_3]**

All supporting materials are stored in a GitHub repository with the following branches:

- * **[BRANCH_1]**
- * **[BRANCH_2]**
- * **[BRANCH_3]**

The repository is located at: **[REPO_PATH]**

Requirements — Full Prompt (continued)

REQUIREMENT 1 — FORMAT & STRUCTURE

- * Output must be a fully functional HTML page (embedded CSS/JS).
- * Design: modern, clean, executive-ready (consulting firm style).
- * Use clear visual hierarchy, whitespace, consistent styling.

REQUIREMENT 2 — NAVIGATION & INTERACTIVITY

- * Support drill-down navigation:
 - Users click sections to explore deeper insights.
 - Use expandable sections, modals, tabs, or sub-sections.
 - Smooth and intuitive — no clutter or confusion.

REQUIREMENT 3 — MAIN PIVOT SLIDE (Landing View)

This is the most important element — a one-page strategic dashboard.

Must include 11 components:

A. Executive Summary

- Concise 4-5 line summary of key insights and implications.

B. 9 Insight Blocks (Matrix Layout)

- A 3x3 grid crossing:
 - * Business lines: **[BUSINESS_LINE_1]**, **[BUSINESS_LINE_2]**, **[BUSINESS_LINE_3]**
 - * Trends: **[TREND_1]**, **[TREND_2]**, **[TREND_3]**
- Each block:
 - * Short headline insight
 - * Optionally 1-2 supporting bullets
 - * Clickable to access deeper content

C. Leadership Recommendation

- Clearly articulated recommended action or strategic direction.

SECTION 2 — VARIABLES TO DEFINE

Fill in every variable below before sending the prompt. The table shows the variable name, what it represents, and the values used in the original project.

Variable	Description	Example
[BUSINESS_LINE_1]	First business line to analyse	<i>Loans</i>
[BUSINESS_LINE_2]	Second business line to analyse	<i>Payments</i>
[BUSINESS_LINE_3]	Third business line to analyse	<i>Deposits</i>
[TREND_1]	First key trend / analytical lens	<i>Market Landscape</i>
[TREND_2]	Second key trend / analytical lens	<i>Disruptive Forces</i>
[TREND_3]	Third key trend / analytical lens	<i>Economic Impact</i>
[BRANCH_1]	GitHub branch for business line 1	<i>feature/loans-credit</i>
[BRANCH_2]	GitHub branch for business line 2	<i>feature/payments</i>
[BRANCH_3]	GitHub branch for business line 3	<i>feature/savings-deposits</i>
[REPO_PATH]	Local path to the cloned repository	<i>C:\Users\A6004290\Retail-Banking-Capstone-Project</i>

Your values — fill in before running the prompt:

Variable	Your value
[BUSINESS_LINE_1]	
[BUSINESS_LINE_2]	
[BUSINESS_LINE_3]	
[TREND_1]	
[TREND_2]	
[TREND_3]	
[BRANCH_1]	
[BRANCH_2]	
[BRANCH_3]	
[REPO_PATH]	

SECTION 3 — REQUIREMENTS BREAKDOWN

Each requirement from the prompt is explained here with context on why it matters and what the AI needs to produce to satisfy it.

1. Format & Structure

- Output must be a single fully functional HTML file.
- All CSS and JavaScript must be embedded inline — no separate files.
- The design should match consulting firm standards: clean, modern, executive-ready.
- Visual hierarchy is critical: headings, sub-headings, and body text must be clearly differentiated.
- Use whitespace generously — do not crowd elements.

2. Navigation & Interactivity

- The page must support drill-down: users click to explore deeper content.
- Acceptable patterns: expandable sections, modals, tabs, or linked sub-sections.
- Navigation must feel smooth and intuitive — no dead-ends, no clutter.
- Every clickable element should have a clear visual affordance (hover state, cursor change).

3. Main Pivot Slide — the 11-Component Dashboard

- This is the landing view and most important element.
- Must function as a one-page strategic dashboard.
- Contains exactly 11 components (A + B + C below).

A — Executive Summary

A concise 4-5 line paragraph summarising key insights and strategic implications drawn from all three business lines and all three trends.

B — 9 Insight Blocks (Matrix Layout)

	[BUSINESS_LINE_1]	[BUSINESS_LINE_2]	[BUSINESS_LINE_3]
[TREND_1]	Headline insight + 1-2 bullets Clickable	Headline insight + 1-2 bullets Clickable	Headline insight + 1-2 bullets Clickable
[TREND_2]	Headline insight + 1-2 bullets Clickable	Headline insight + 1-2 bullets Clickable	Headline insight + 1-2 bullets Clickable
[TREND_3]	Headline insight + 1-2 bullets Clickable	Headline insight + 1-2 bullets Clickable	Headline insight + 1-2 bullets Clickable

C — Leadership Recommendation

A clearly articulated recommended action or strategic direction. Should feel decisive, actionable, and board-ready — not a list of observations.

4. Content Handling

- Extract and synthesise insights from [BRANCH_1], [BRANCH_2], [BRANCH_3].
- Prioritise clarity over volume and insight over raw data.
- Where detailed data exists, surface it via drill-down interactions, not on the main slide.
- Avoid pasting raw tables or charts directly into the landing view.

5. Design Expectations

- Typography: clear hierarchy with a strong display font for headlines.
- Color coding: subtle differentiation by business line or trend type.
- Layout: card-based 3x3 grid for the insight matrix.
- Balance: the page must not be text-heavy — white space is intentional.

- Aesthetic reference: McKinsey Quarterly / BCG Perspectives executive style.

6. Output Specification

- Deliver a single .html file.
- All CSS must be inside a <style> tag; all JS inside a <script> tag.
- No external CDN dependencies unless absolutely necessary — the file must open offline.
- Code should be clean, readable, and logically structured with comments.
- The file must render correctly in a modern browser without a local server.

SECTION 4 — ITERATION & REFINEMENT PROMPTS

After the initial HTML is generated, use these follow-up prompts to refine specific areas. Replace the highlighted variables with your actual feedback.

Adjust visual style

The page looks good but the **[ELEMENT]** needs to be **[CHANGE]**.

Keep everything else the same. Do not touch the navigation or the matrix grid.

Replace content in a specific cell

Update the insight block at row **[TREND_NAME]** / column **[BUSINESS_LINE_NAME]**.

New headline: **[NEW_HEADLINE]**

New bullets:

- **[BULLET_1]**

- **[BULLET_2]**

Add a drill-down panel

When the user clicks the **[BUSINESS_LINE]** / **[TREND]** block,

open a modal or side panel showing the following detail content:

[DETAIL_CONTENT]

Style it to match the rest of the page.

Swap the Executive Summary

Replace the Executive Summary section with the following text:

[NEW_EXECUTIVE_SUMMARY_TEXT]

Keep formatting: 4-5 lines, same font size and colour as before.

Change the Leadership Recommendation

Replace the Leadership Recommendation with:

[NEW_RECOMMENDATION]

It should feel decisive and board-ready. One paragraph maximum.

Save and deploy the final file

Save the final HTML file as **[OUTPUT_FILENAME]**.html in **[OUTPUT_PATH]**.

Do not push to Git yet. Open it in the browser so I can review it.

Push to GitHub (after approval)

The page looks good. Push `[OUTPUT_FILENAME].html` to GitHub.

Branch: `[TARGET_BRANCH]`

Commit message: `[COMMIT_MESSAGE]`

SECTION 5 — KEY RULES & GUARDRAILS

- **Single file only:** The output must always be one .html file with all CSS and JS embedded inline. Never split into separate stylesheet or script files.
- **No external dependencies:** The file must open correctly in any modern browser without internet access or a local server. Avoid CDN links unless absolutely required.
- **Sandbox first, push later:** Save the file locally and open it in a browser for review before any Git operations. Never commit or push without explicit approval.
- **Content over decoration:** Design serves the story. Every visual element must earn its place. Avoid decorative charts or graphics that don't carry insight.
- **Never overwrite source files:** Do not modify any files in the GitHub branches. The HTML output is a new file synthesising from those branches.
- **Iterate on feedback:** After the first version is reviewed, use the iteration prompts in Section 4 to make targeted changes. Rebuild the whole file only as a last resort.
